

**Name**    **cwChartCustomColor Version**

**Updated by** Mathias PFAUWADEL 1.1

## Patch Notes

- 1.1 : Allow Remapping of Color
- 1.0 : 1st version working

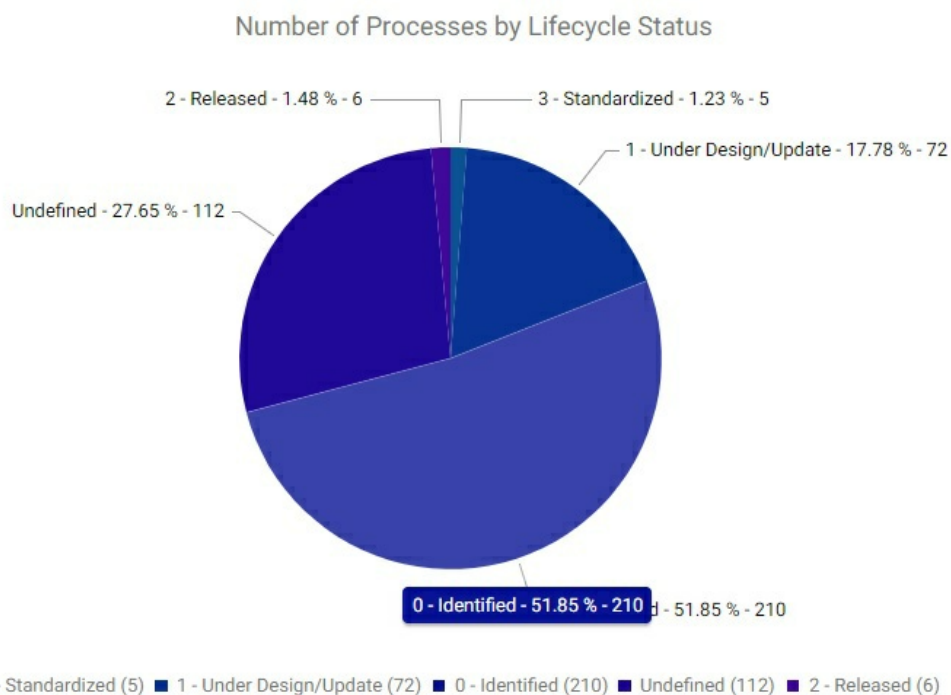

## TBD

- More Options

## Description

Allow you to change colors of charts depending on the view (indexPath or objectPage). You can also change the defaults colors. You can map a color to a value

## Screen Shot

## Evolve Configuration

This is a specific so no layout to configure on Evolve

## Options

to be configure in

C:\Casewise\Evolve\Site\bin\webDesigner\custom\Marketplace\libs\cwChartCustomColor\src\cwChartC

cwCustomerSiteActions.cwChartCustomColors.ColorByView.default allow to change the default color set for chart, so it will be apply to all page that don't have a specific set of color

cwCustomerSiteActions.cwChartCustomColors.ColorByView.{name of the view} allow to change the default color set for chart

```
// custom colors for specifics views
cwCustomerSiteActions.cwChartCustomColors.ColorByView.index_process_lifecyc
cwCustomerSiteActions.cwChartCustomColors.ColorByView.index_process_lifecyc
cwCustomerSiteActions.cwChartCustomColors.ColorByView.index_process_lifecyc
// default color
cwCustomerSiteActions.cwChartCustomColors.ColorByView.default = {};
cwCustomerSiteActions.cwChartCustomColors.ColorByView.default.colors = ['#0
cwCustomerSiteActions.cwChartCustomColors.ColorByView.default.mapping = {Tâ
```

Colors define the set of color. Color must in hex value. You can select has many color as you want, the chart will pick them in order, if a chart need 6 colors and you put only 5 in

cwCustomerSiteActions.cwChartCustomColors.ColorByView.{name of the view}, it will use the color number 1 for the 6th color.

If you want a value to have a specific color, use mapping and attach a color to a label
